Remedies Module

Our brand new, fully comprehensive Remedies Module provides access to English summaries of the remedies' analysis from the decisions of 55 Competition Authorities across the world. Spanning from 2000 to present, the Remedies Module captures over 2.000 conditionally cleared merger control decisions, uniquely triangulating relevant markets with competitive concerns and the remedies accepted by CAs to address them. In combination with our Caselex Market Definitions Module, it represents an unprecedented source of merger control intelligence for competition law professionals around the world.

Navigate the labyrinth of conditionally cleared transactions and find key precedents based on NACE sector, market definition, type of anticompetitive effect and type of remedy.

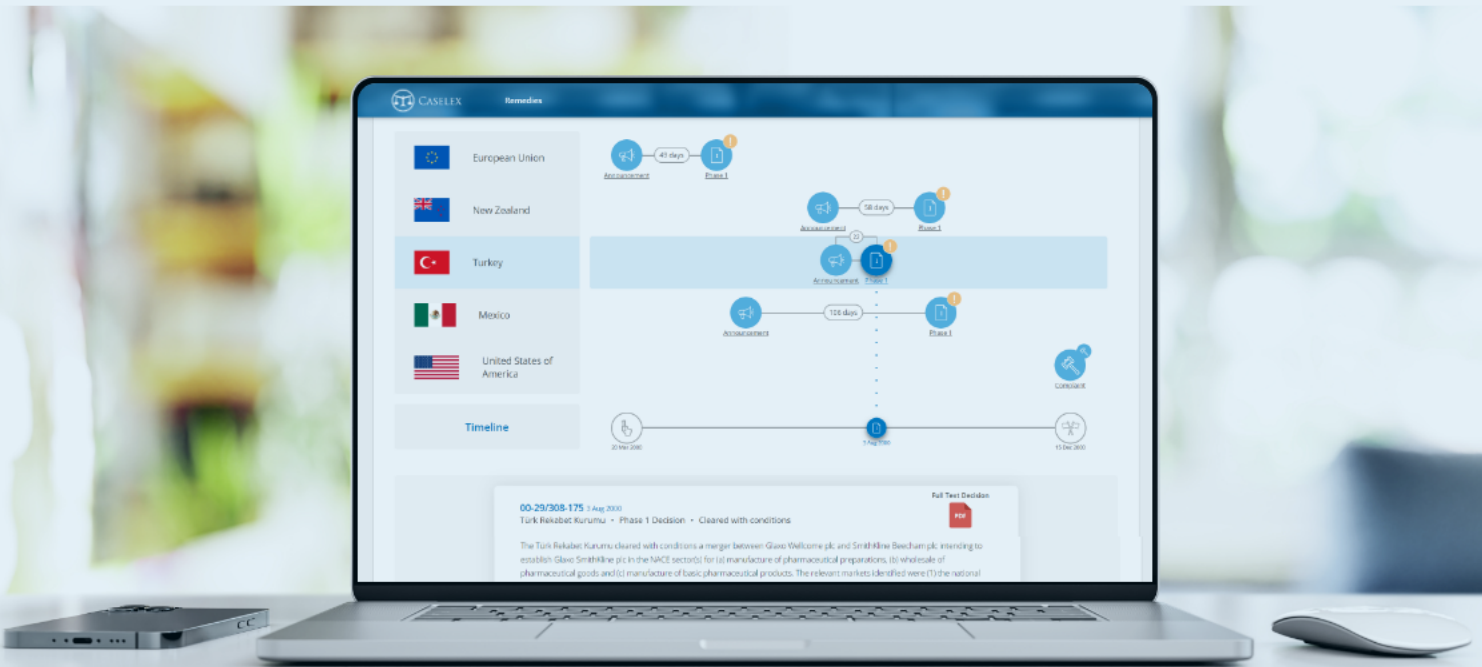

Engineer commitment packages that are suitable and sufficient to alleviate potential concerns by the Competition Authorities.

Identify obstacles, such as likely competitive concerns and high market shares, early in the deal-making phase and safely plan ahead.

In the last stages of a challenging notification, ensure that you avoid a prohibition decision and minimise loss of assets.
