Global Market Definitions Module

Our unique Market Definitions Module provides access to English translations of relevant markets, drawn from the decisions of 59 Competition Authorities across the world. With our coverage spanning from 2,000 to present, our database captures over 24,000 merger control and abuse of dominance decisions generating over 70,000 market definitions. Currently, we support the majority of Europe's 100 leading law firms and over 30 national competition authorities worldwide.

Remedies Module NEW

Our brand new, fully comprehensive, Remedies Module provides access to English summaries of the remedies' analysis from the decisions of 55 Competition Authorities across the world. Spanning across the past 23 years, the Remedies Module captures over 2,000 conditionally cleared merger control decisions, uniquely triangulating relevant markets with competitive concerns and the remedies accepted by CAs to address them. In combination with our Caselex Market Definitions Module, it represents an unprecedented source of merger control intelligence for competition law professionals around the world.

Navigate the labyrinth of conditionally cleared transactions and find key precedents based on NACE sector, market definition, type of anticompetitive effect and type of remedy.

In the last stages of a challenging notification, ensure that you avoid a prohibition decision and minimise loss of assets.

Engineer commitment packages that are suitable and sufficient to alleviate potential concerns by the Competition Authorities.

Identify obstacles, such as likely competitive concerns and high market shares, early in the deal-making phase and safely plan ahead.

The Caselex difference
